Contents

Duration: 1 day.

A 7-hour training programme for those trained or working with OHSAS 18001.
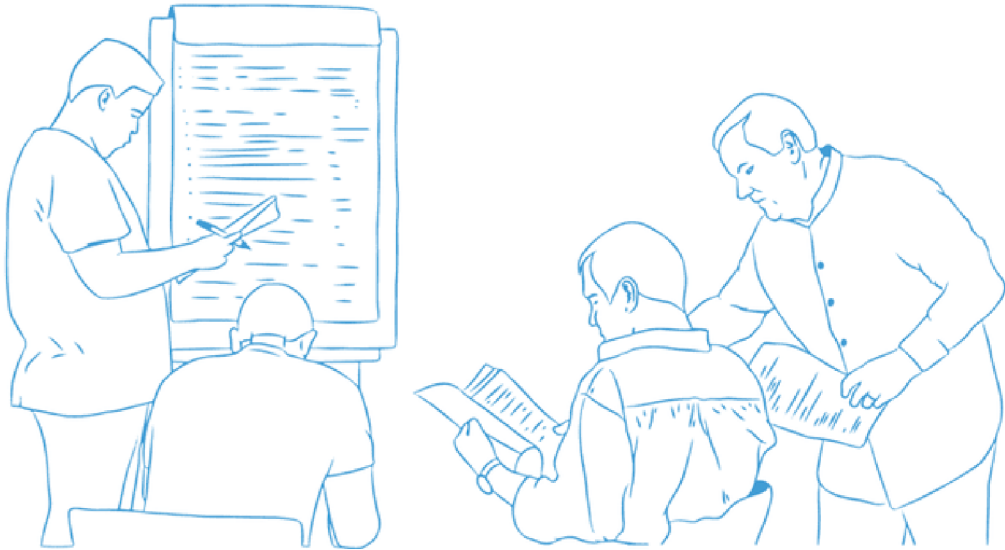

CPD value: 7 points.

Boost your CV and your Continuing Professional Development record.

Personal tuition option.

Arrange this module as a 1-2-1 in our Virtual Classroom, or groups in-house.

ISO 50001 is becoming increasingly important to businesses where profitability hinges on energy efficiency.

ISO 50001 can provide organisations with a structured approach to energy management, helping them to achieve a range of benefits related to energy efficiency, cost savings, environmental sustainability, and regulatory compliance.

Arranging this 1-day ISO 50001 Awareness course for your staff will enable them to contribute to the development, implementation, and maintenance of your company's Energy Management System. Their training will quickly pay for itself thanks to the noticeable reductions in your energy overheads.

Overview

Your immediate business benefits from this course.

Whether you intend to get certified to ISO 50001 or not, simply training your staff to work within an Energy Management System can provide several, immediate benefits to your organisation.

For example, employees who understand the ISO 50001 criteria are better positioned to identify and implement energy-saving strategies; and staff that are familiar with ISO 50001 can assist the organisation in identifying and eliminating inefficiencies in energy usage, resulting in lower costs and higher performance.

Learning about ISO 50001 can help to develop a culture of teamwork and collaboration among employees as they work together to find energy-saving opportunities and implement energy-saving initiatives.

And finally, a slick EnMS maintained by knowledgeable staff can quickly separate you from competitors, by demonstrating your commitment to sustainability and energy management through ISO 50001 Certification.

Benefits

What will I learn?

ISO 50001 is an energy management standard that provides a framework for organisations to improve their energy efficiency, reduce energy consumption, and minimise energy expenses.

The standard helps organisations identify possibilities to improve their energy performance, resulting in more efficient energy use and lower energy consumption; thereby realising significant cost savings on energy bills and related expenses.

By supporting more sustainable energy practices, ISO 50001 can assist organisations in reducing their carbon footprint and overall environmental effect. Furthermore, ISO 50001 can help with compliance with energy-related regulations and requirements, such as those concerning greenhouse gas emissions and energy efficiency standards.

By implementing ISO 50001, your organisation can demonstrate its commitment to sustainability and environmental responsibility, which will improve your reputation and competitiveness in your market.

Syllabus

⭐⭐⭐⭐⭐

Trusted

"The tutors created a unique, open atmosphere, thoroughly engaging. I left the course with the confidence to put my new skills immediately into practice."

A global standard in auditor certification.

SQMC began in 1989 as an ancillary unit within the Management Sciences faculties of one of the United Kingdom's leading universities, providing short auditing courses accredited by the International Register of Certificated Auditors (IRCA). Within four years we were awarded Centre of Excellence status by the Institute of Quality Assurance (now called the Chartered Quality Institute).

SQMC has since evolved into an independent, private training supplier to individual students and multinational corporations in 88+ countries.

SQMC
Learn. Quality. Simply.

Reasons

- ✓ **99% of participants earn their globally-recognised certificate, 1st time.**
